Your Trusted Equipment & Attachments Specialist

Newsletter, May 2015

We build with Pride, You use with Trust.

Designed for Functionality, Engineered for Reliability.

Cat385 Long Reach on Barge

EIK long reach, always within reach!

Another satisfied customer who bought EIK long reach for the Cat385 use in the dredging project is enjoying hefty return for the investment.

We have assisted the customer to design a long reach package that not only meeting the job requirement, but also on a very tight deadline.

The manufacturing criteria and facilities requirement for supplying these long reach booms are much more stringent than usual as the machine is working in the oil and gas industry. This has never been a deterrent for us. We have successfully done it in the past, and are always ready for the next.

Intermat 2015

Busy and Fruitful

What we have learnt from the show was many potential customers were surprised that we are able to design and build amphibious excavator and long boom for very large excavator, 80 ton and bigger. To date, the largest booms we have designed and built were on Hitachi EX1800 and Liebherr 994.

They have always thought that such products are the forte of the US, European and Japanese manufacturers. Well, it is certainly true, however, we are the selective few in the world that has similar capability and compete at the international level.

In the previous issue we first reported

Polymer Track Shoe

Now comes with 24-month warranty

the official introduction of the polymer track shoe. We also took the chance to launch it during the Intermat show, the response has been very positive.

Customers will be thrilled to learn that they are now getting 24-month or 2,400-hour warranty whichever comes first.
